

This will be a redistribute e-mail from years past for drinks that are one off from the register.  
Please pass on as needed.

**POS/ABS ONE DRINK OFF (from register) ((i.e. Coke is Soda and Sprite is Orange))**

**Turn OFF CCU (make sure green light is OFF)**

**Turn ABS OFF**

**Turn CCU back ON (make sure green light is ON)**

**When the monitor is blank and re-booted completely, turn the ABS back ON**

**Turn CCU back OFF (make sure green light is OFF)**

**Wait about 20 seconds and power ON the CCU again and let it fully re-boot**

**Turn ABS OFF for about 20 seconds then back ON**

The reason for this procedure is to copy the master "drinks.dat" file throughout the system (POS keeps several copies) and this will "sync" it back up.
